### Window Film Description

This solar reflective metal sputtered window film offers excellent solar heat and glare reduction, but allows the natural light to enter, for a luminous interior, while affording a comfortable and temperate environment.

This film from the outside view gives a warm rich copper finish with a clear view looking out.

12 year warranty against peeling, discolouration, bubbling and cracking.

### Carbon Negative

Carbon Negative window film means that the environmental impact required to manufacture, distribute, install and dispose of at the end of the films life cycle, is less than the carbon reduction achieved as a result of the window films installation.

### Applications

Ideal for most internal glass applications including commercial, residential and industrial applications. A popular film for schools, commercial buildings, conservatory roof glass and daytime privacy.
