

PAINT ON A ROLL

Window Frame Wrapping

Refurbish window, door frames and cladding

At Colour Transformations our exterior grade vinyl will transform the exterior or the interior of your building fast and hassle-free with minimal disruption to you and your customer.

Transform your windows using our professional vinyl finishes. We deliver a superior finish and a cost-effective solution when compared to traditional window frame spray painting methods.

Professional vinyl wraps that have been designed for outdoor use using strong permanent adhesives in one single layer. Contouring smoothly around curved and irregular surfaces.

Our window frame vinyl wraps can be applied in most weather conditions including wet, cold and British Winters.

We require no masking. Vinyl installation is hassle-free with no paint odours or downtime compared to traditional spray paint methods.

Plus our exterior vinyl requires no drying time. Unlike paint, applying our exterior vinyl will not need multiple applications of paint or leave over-spray on nearby vehicles and neighbour properties.

Using professional quality vinyl, we provide a superior finish to many architectural surfaces, that are frequently specified by architects and surveyors working on refurbishment schemes for retail stores, commercial offices and industrial units.

Key Benefits

- For use on exterior or interior windows, doors frames and cladding.
- Suitable for plastic, aluminium and metal surfaces.
- Ideal for both commercial and domestic properties.
- Professional quality and durable finish.
- Add value and appearance to your property.
- Conforms over curved irregular surfaces for a smooth paint-like finish.
- A cost-effective solution versus conventional spray painting.
- No odours
- UV Stable
- Grey, permanent adhesive
- Environmentally friendly
- Hard-wearing to suit harsh British weathers
- Large range of exterior vinyl colours
- Efficient, clean and quick installation
- Up to 5-10 year durability

Features	Benefits
90 micron single layer solution with no drying time	Faster, cleaner and more efficient application (vs. paint). Minimum business disruption and downtime
High durability	Avoids frequent refurbishment projects - lasts up to ten years (five years for metallics)*
Highly durable single layer solution	Cost effective solution, offers up to 25% financial savings over the economic life of the project
Highly conformable, suitable for application to curved or irregular surfaces	Attractive, smooth finish - with exceptional dimensional stability
Permanent adhesion	Remains in place on building substrates that include plastics, aluminium, uncoated/coated steel, reinforced facade panels and HPL - with no primer required
Broad application and service temperature range	Can be applied in different weather conditions, in high humidity (rain, fog, etc), and onto substrates down to 0°. Survives service temperatures of -50°C to +110°C
Protects surfaces against decay	Avoids costly deterioration such as fading, damp and UV light. Makes building facades and window frames last longer
Fire-resistant	Meets fire certification EN13501-1, B-s1, d0
No volatile components or vapours	No discomfort from odours for applicators or building users
Wide choice of colour & finish options	Standard colours and metallics plus fast custom colours (including RAL, Pantone®). High gloss, lustre and matt finishes
